## All of Inflation's Little Parts

Each month, the Bureau of Labor Statistics gathers 84,000 prices in about 200 categories — like gasoline, bananas, dresses and garbage collection — to form the Consumer Price Index, one measure of inflation.

It's among the statistics that the Federal Reserve considered when it cut interest rates on Wednesday. The categories are weighted according to an estimate of what the average American spends, as shown below.

### An Average Consumer's Spending

Each shape below represents how much the average American spends in different categories. Larger shapes make up a larger part of spending.

Color shows change in prices from March, 2007 to March 2008

ZOOM IN ZOOM OUT

### Food and beverages 15%

The high price of oil is a factor that has made food prices rise quickly.

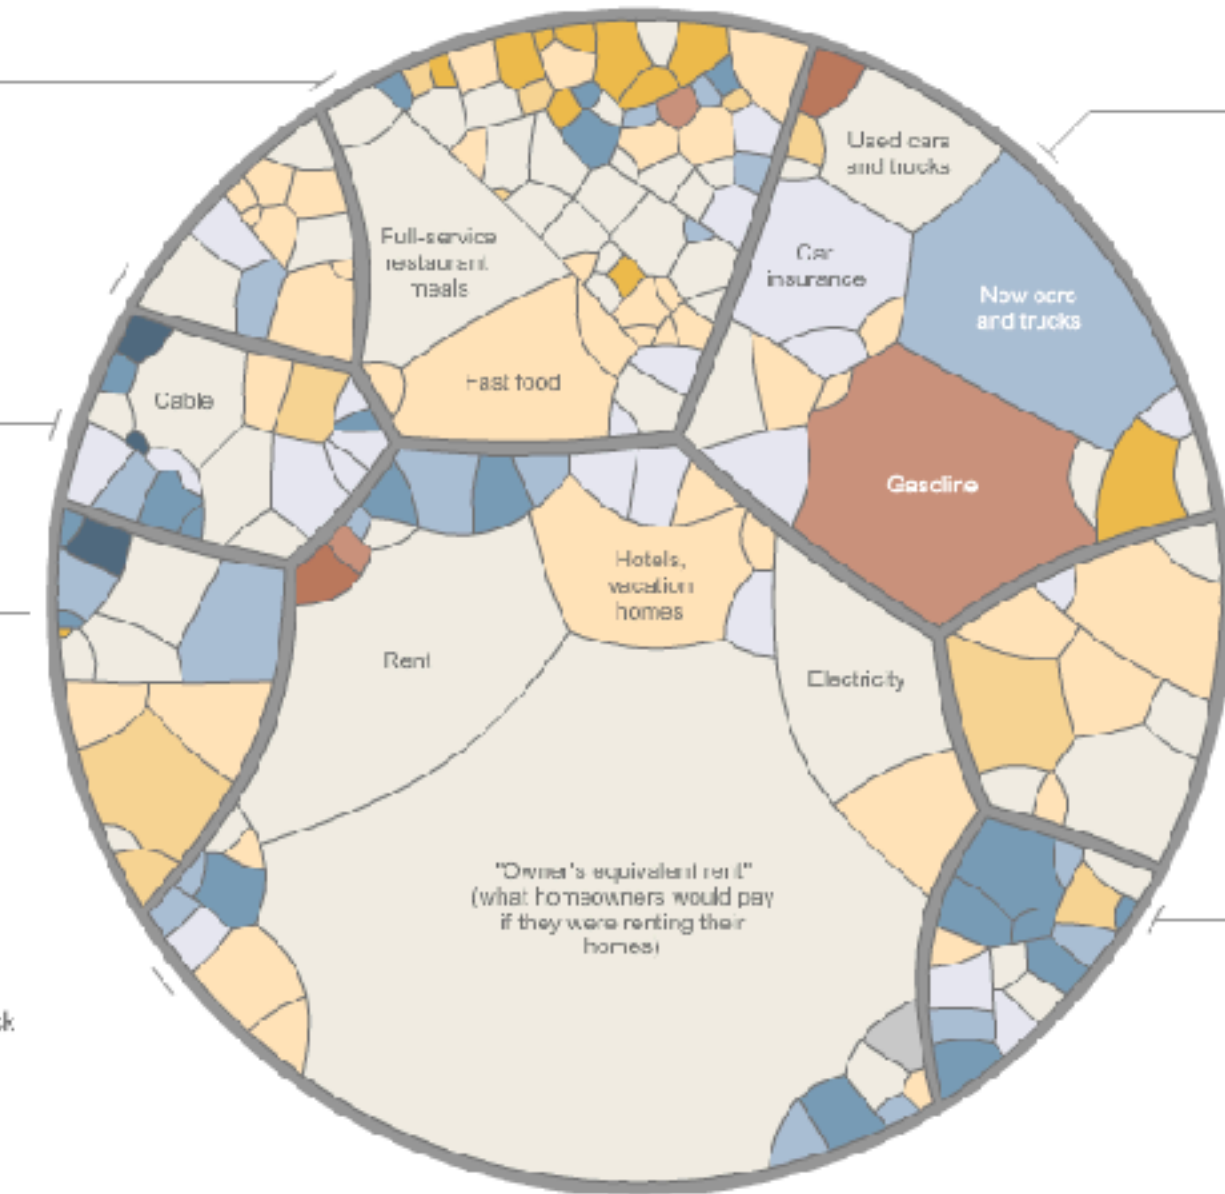

### Miscellaneous 3%

### Recreation 6%

Cellphones were added to the index in 1997. Because the Consumer Price Index can be slow to add new goods, which are often cheaper, it may overstate parts of inflation.

### Housing 42%

In the C.P.I., home ownership costs track rent prices more closely than housing prices. This means inflation may have been understated when home prices were rising faster than rents.

**Transportation 18%**  
Gas is 5.2 percent of spending nationwide, but only 3.8 percent in the New York area.

**Health care 6%**  
As a group, the elderly spend about twice as much of their budget on medical care.

**Apparel 4%**  
The ratio of spending on women's clothes to that on men's clothes is about 2 to 1.

Math fail?!

# World's Most Accurate Pie Chart

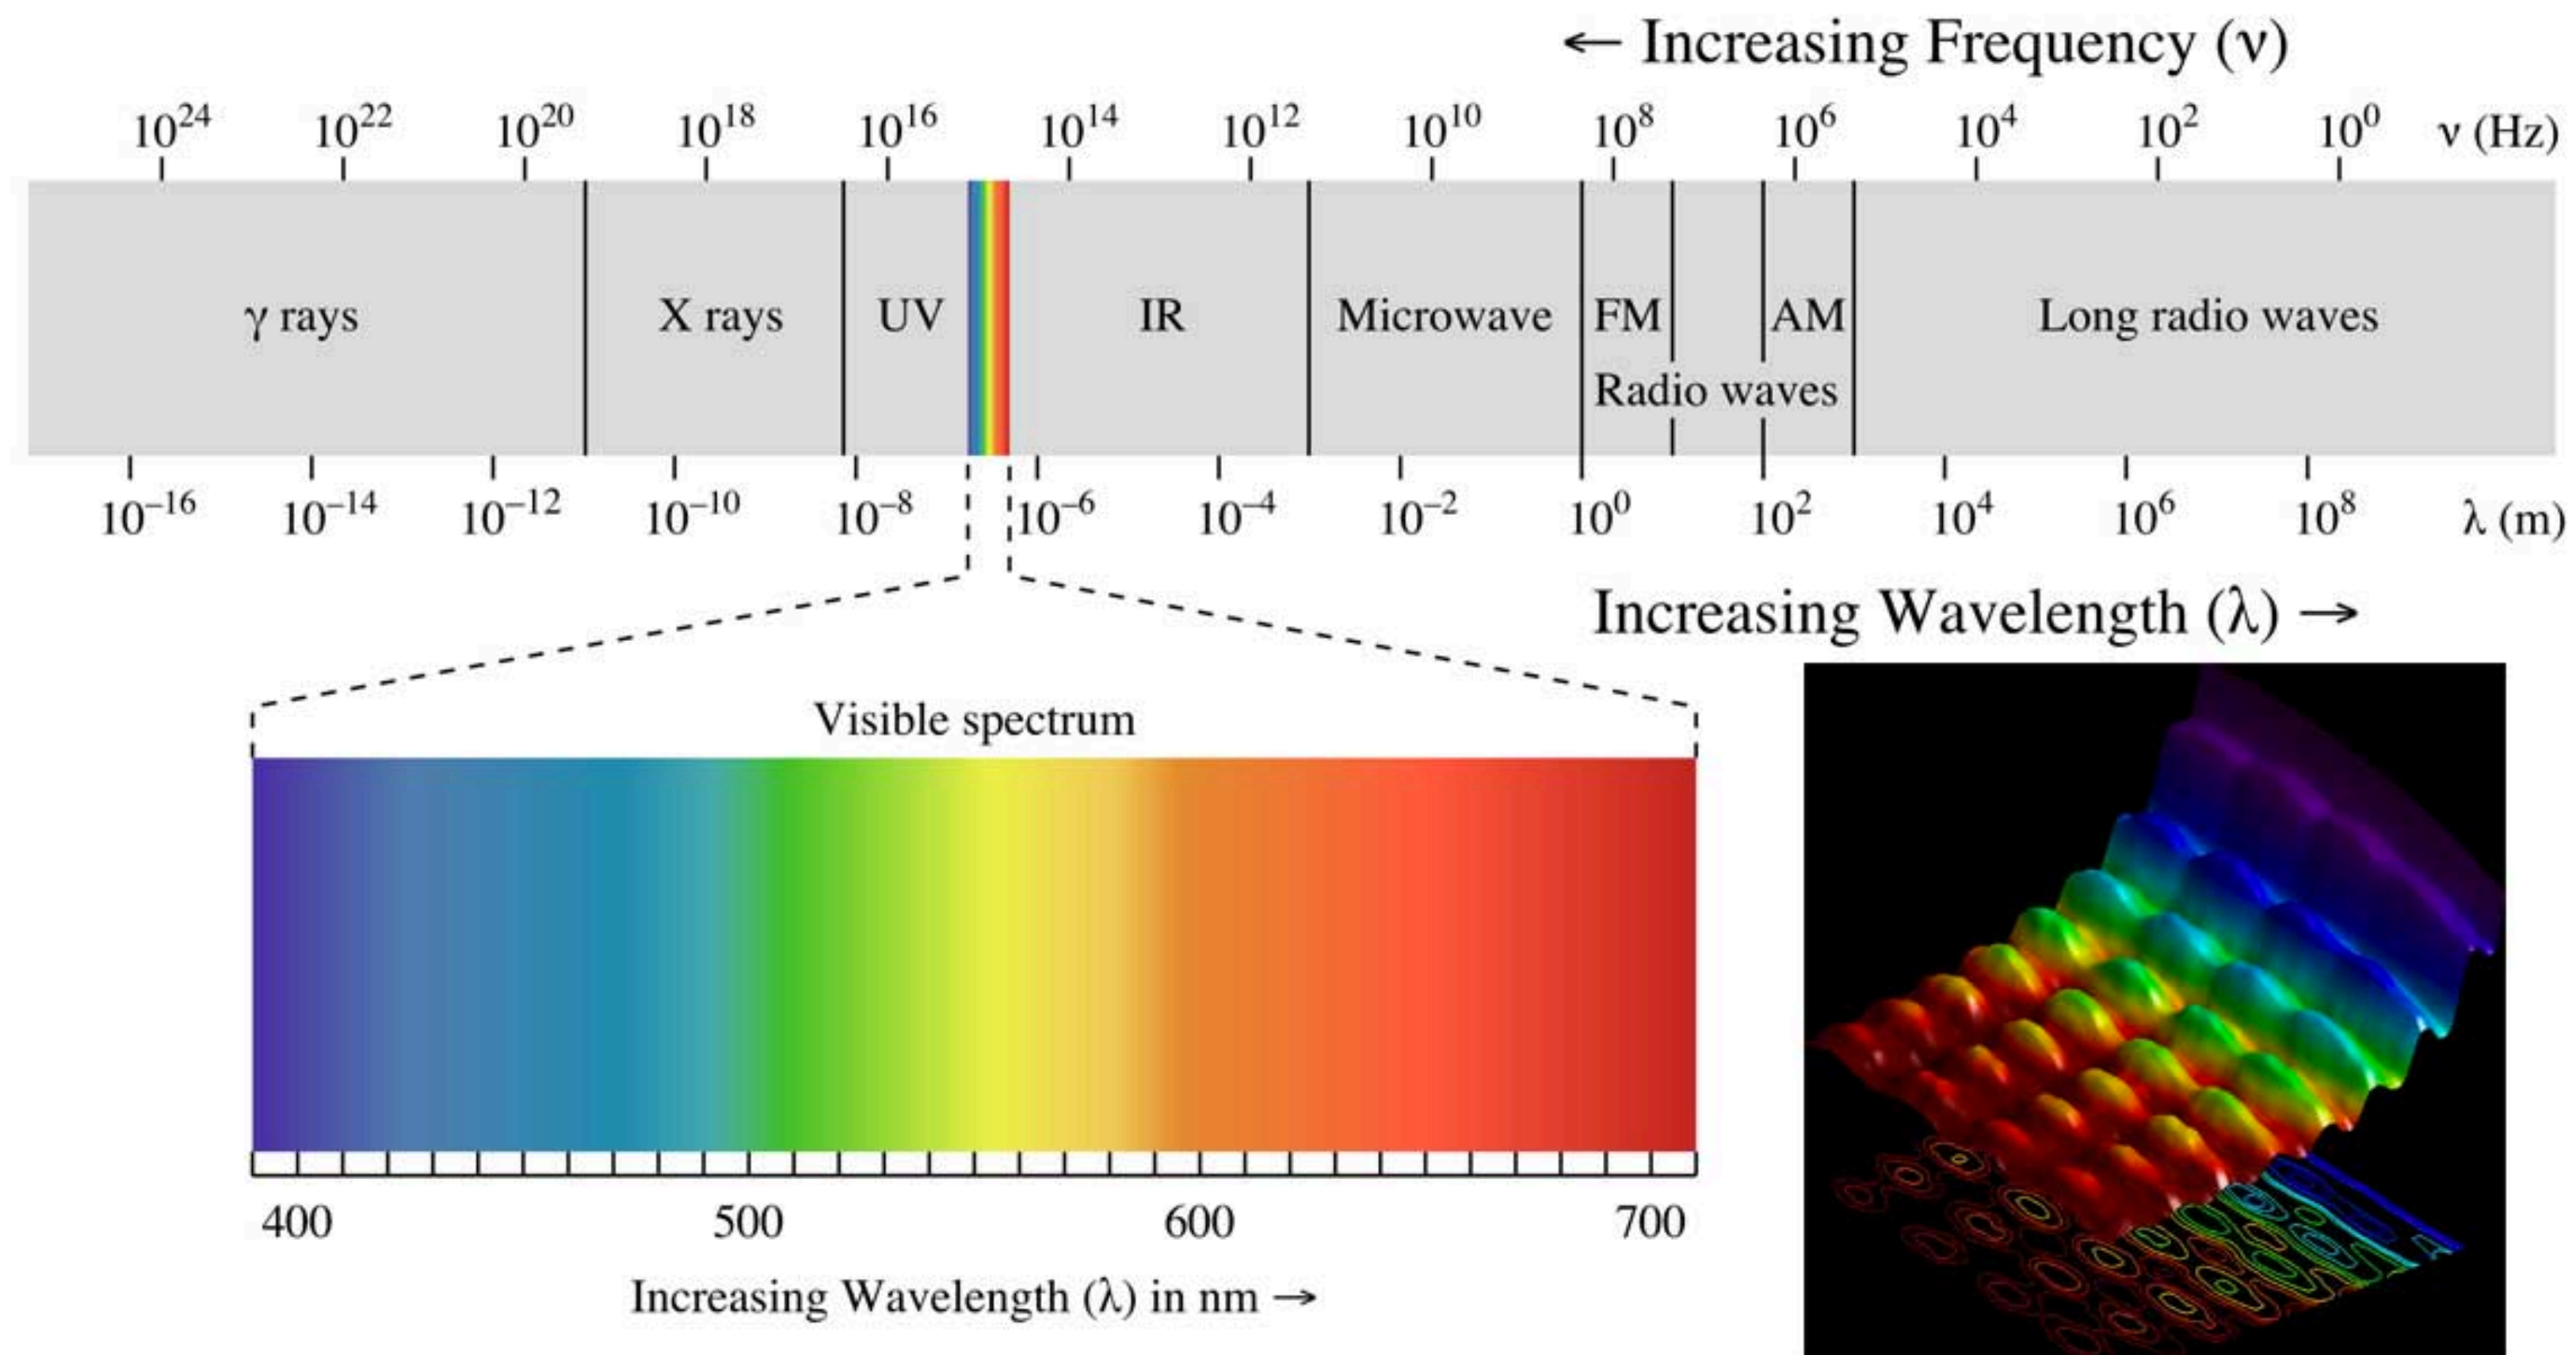

# Some rules of thumb

- You're comparing the **parts to the whole**.
- There's **a small number of slices**.
- **Sort** the values.
- Start at **12 o'clock**.
- Use **alternatives** (e.g., bar chart)

Rainbow Colormap

The **rainbow color map** is based on the order of colors in the the visible light spectrum.

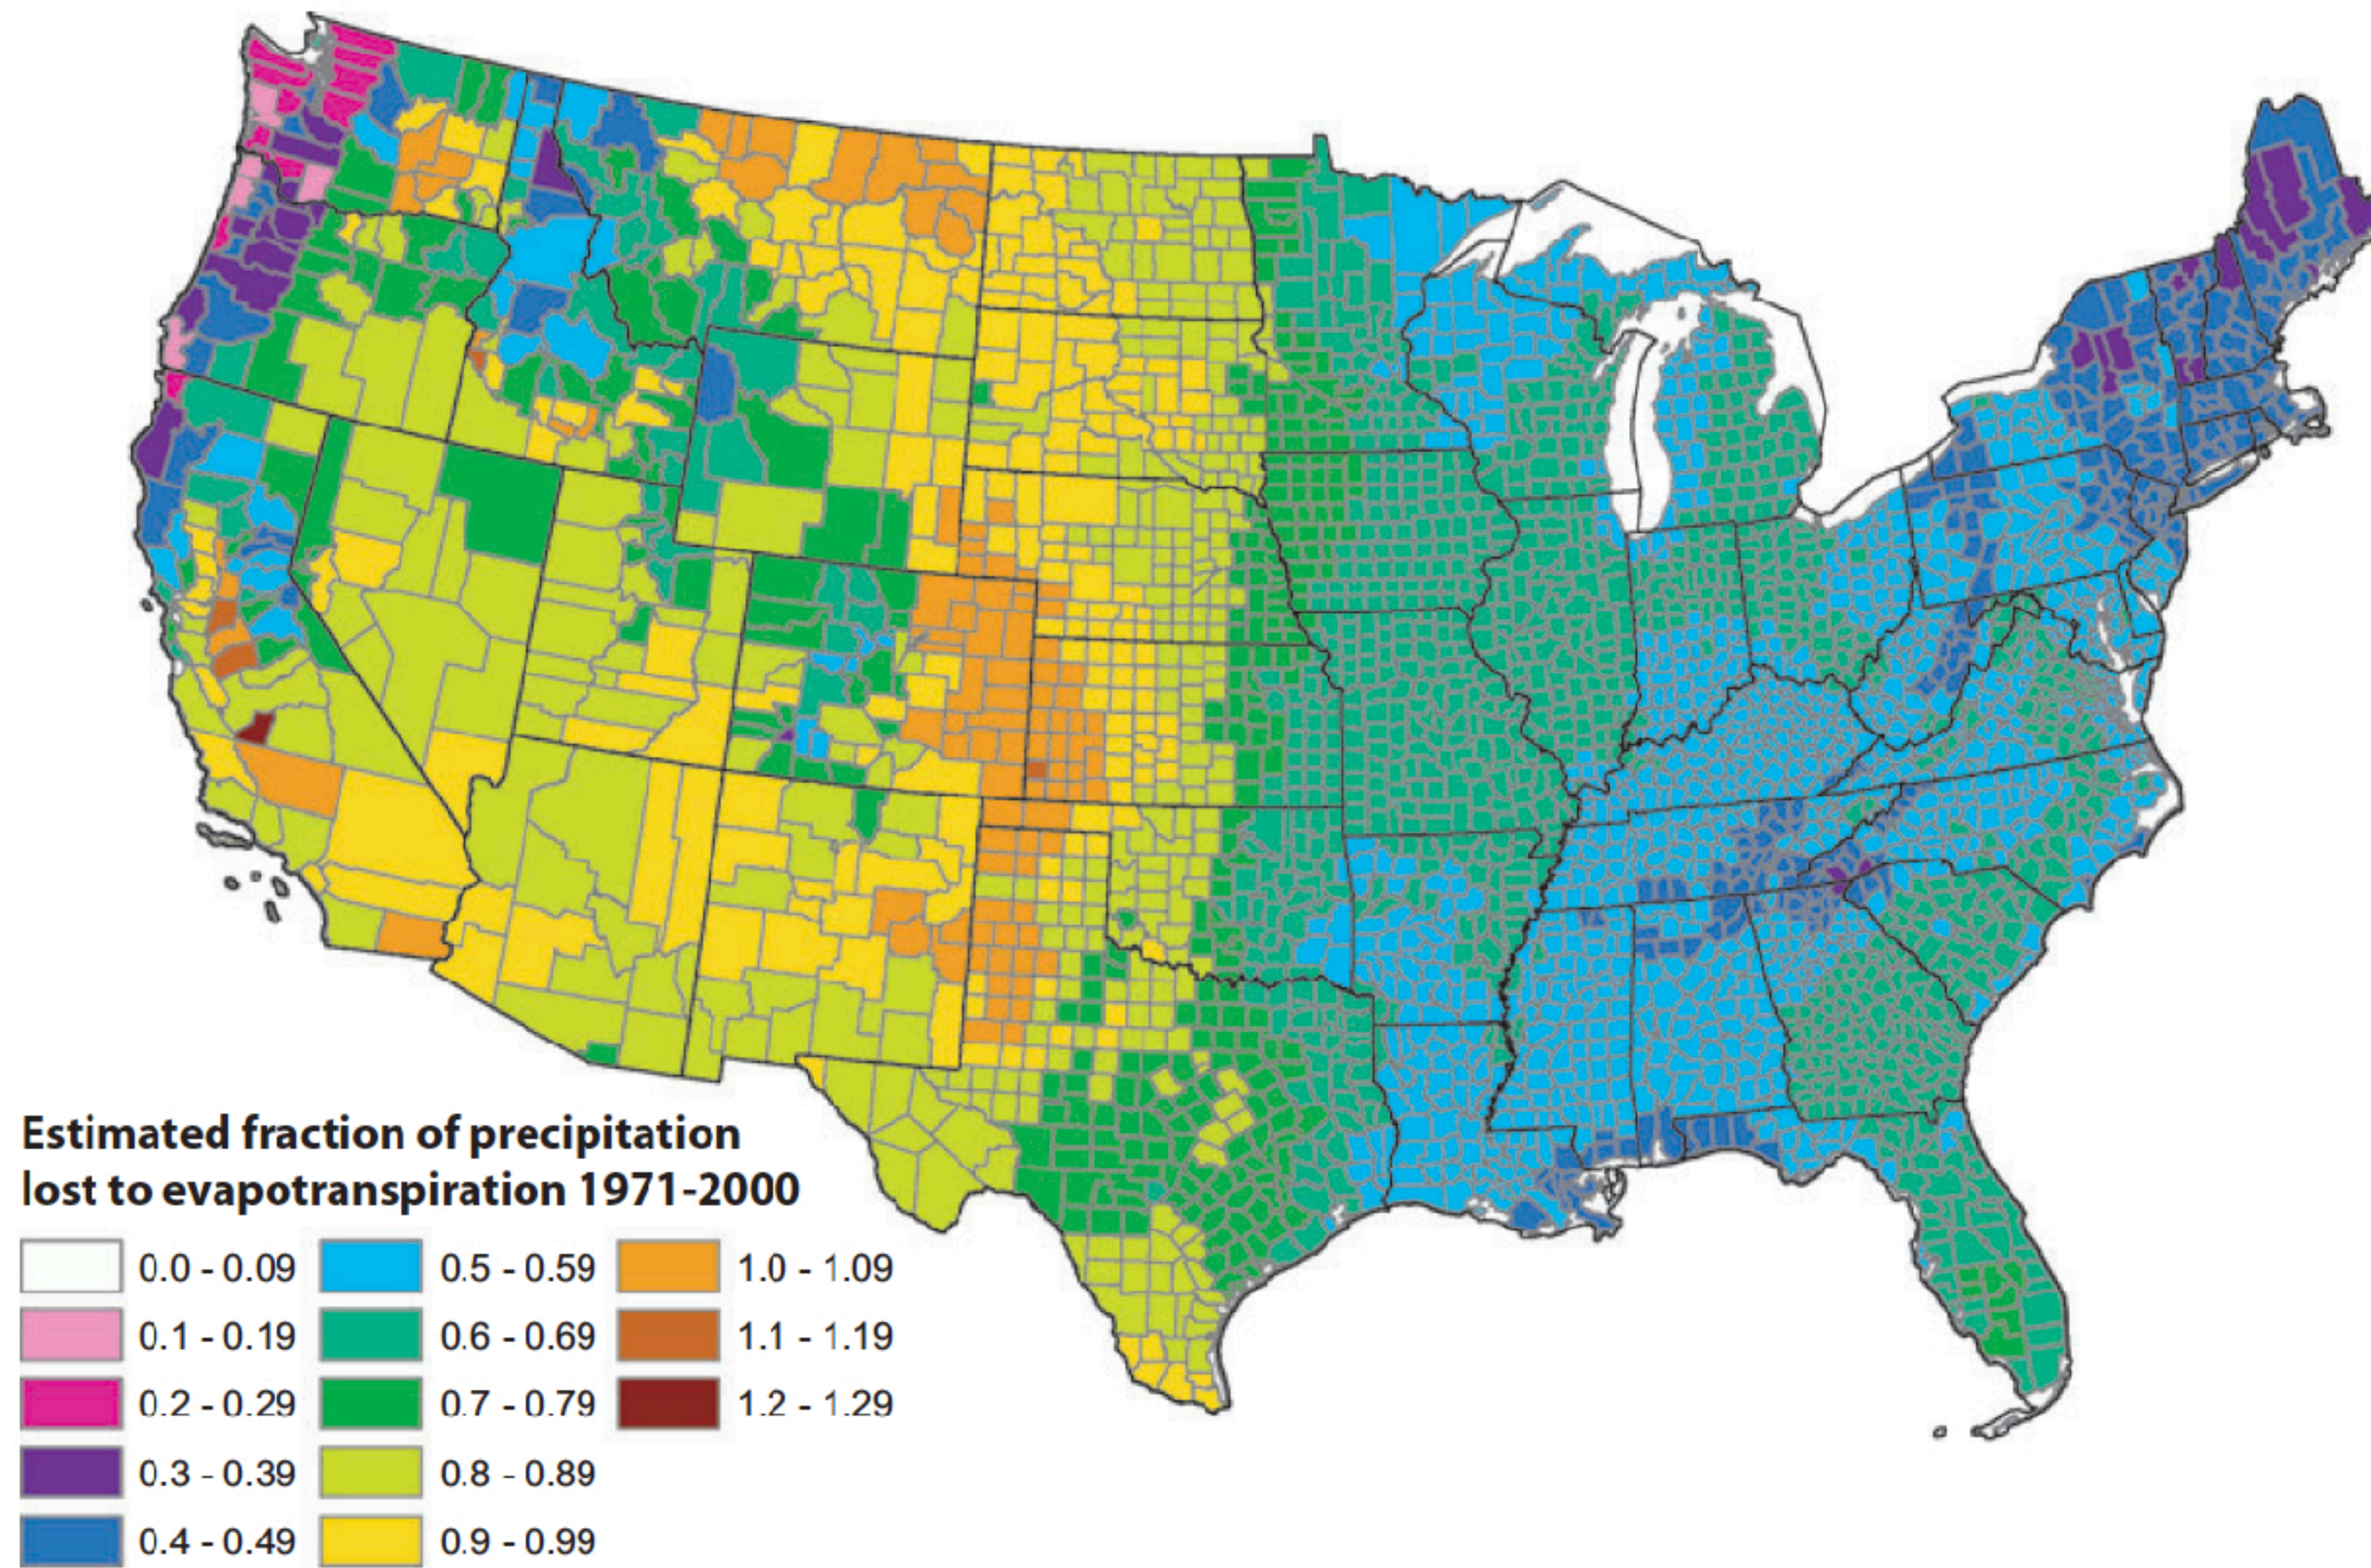

FIGURE 13. Estimated Mean Annual Ratio of Actual Evapotranspiration (ET) to Precipitation ( $P$ ) for the Conterminous U.S. for the Period 1971-2000. Estimates are based on the regression equation in Table 1 that includes land cover. Calculations of  $ET/P$  were made first at the 800-m resolution of the PRISM climate data. The mean values for the counties (shown) were then calculated by averaging the 800-m values within each county. Areas with fractions  $>1$  are agricultural counties that either import surface water or mine deep groundwater.

Can you say which **color** represents a **higher** or **lower** value group?

FIGURE 13. Estimated Mean Annual Ratio of Actual Evapotranspiration (ET) to Precipitation ( $P$ ) for the Conterminous U.S. for the Period 1971-2000. Estimates are based on the regression equation in Table 1 that includes land cover. Calculations of ET/ $P$  were made first at the 800-m resolution of the PRISM climate data. # Lack of perceptual ordering

## Hue

## Luminance

# Example: How many low ESS regions found?

ESS: Endothelial shear stress

World's Most Accurate Pie Chart

39% → 71%

10.2 sec/region → 5.6 sec/region

# Some rules of thumb

**Qualitative** (rainbow) scheme — **categorical** data.

**Sequential** scheme — **ordered** categories or **numerical** data

**Diverging** scheme — **numerical** data with a meaningful **mid-point**.

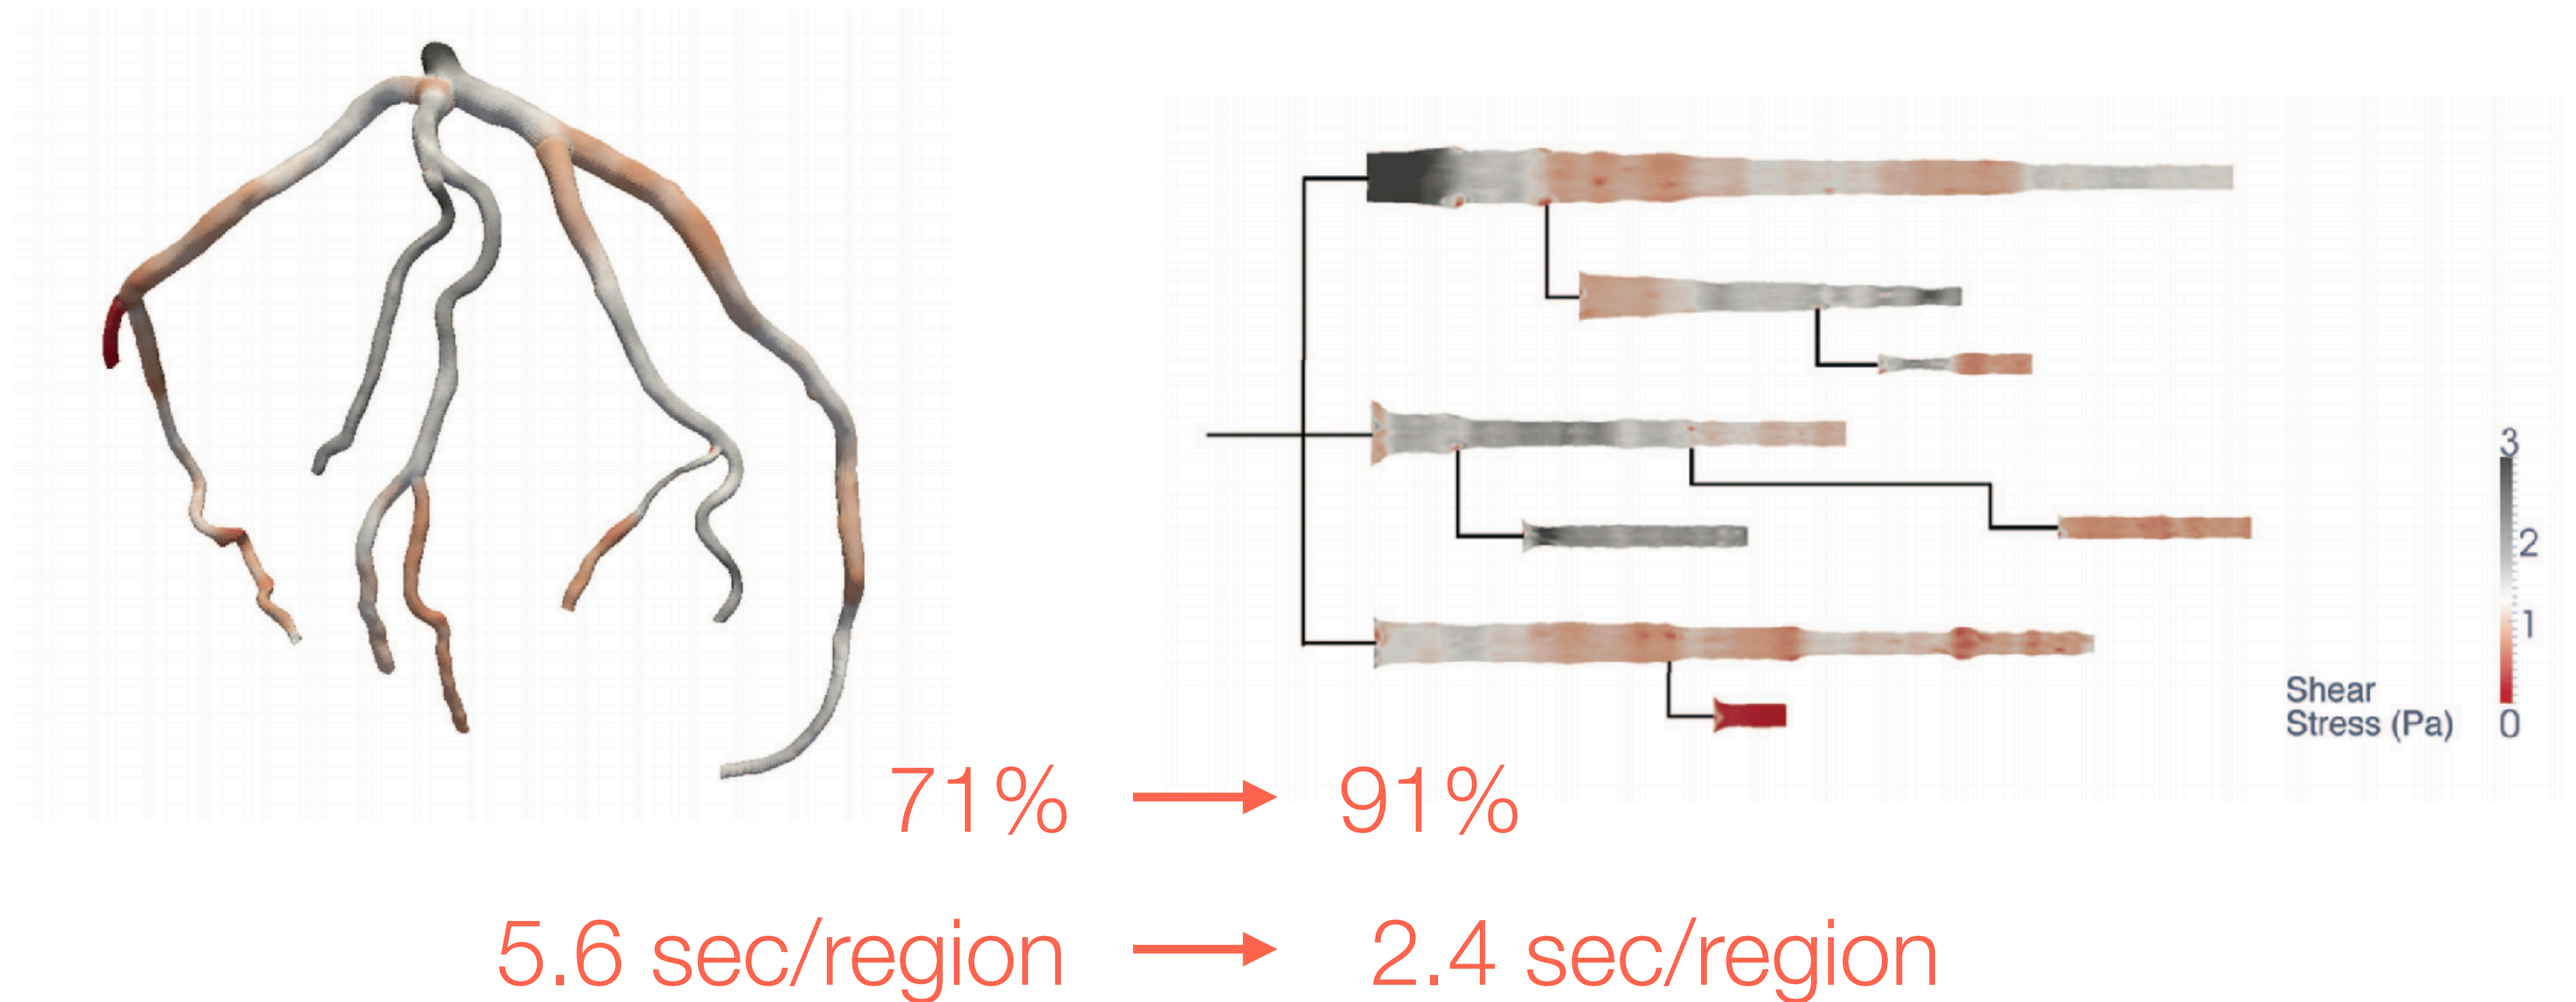

3D charts

# Perspective distorts information

2D is more **accurate** and **efficient** in identifying problematic regions.

# Perspective distorts information

# Occlusion hides information

Can rotate, but still no picture at once.

# Tilted text isn't legible

# Depth judgment is bad

Steven's Psychophysical Power Law:  $S = I^N$

Actual intensity change

VS

Perceived Sensation

Human underestimate depth!

External cognition vs Internal cognition

# Eyes beats memory

Harder to compare visible item to memory of what you saw

Animation —  
narration can help

# Eyes beats memory

Easy to compare by moving eyes between side-by-side views

Small multiples — high data density

Use external cognition over internal cognition

# Tufte Principles

- Graphical integrity
- The lie factor
- Maximize data-ink ratio
- Avoid *harmful* chart junk

# Other considerations

- Pie charts
- Rainbow colormap
- 3D charts
- Eyes beats memory

# Subjective Dimensions

- **Aesthetics**: Attractive things are perceived as more useful.
- **Style**: Communicates brand, process, who the designer is.
- **Playfulness**: Encourages experimentation and exploration.
- **Vividness**: Can make a visualization more memorable.

# Subjective Dimensions

- **Aesthetics**: Attractive things are perceived as more useful.
- **Style**: Communicates brand, process, who the designer is.
- **Playfulness**: Encourages experimentation and exploration.
- **Vividness**: Can make a visualization more memorable.

Important if you want others to look at your chart!
